

Smart Living

Partnership Awards 2023/24

by etnet

GREEN INNOVATION AND SUSTAINABLE DIGITALISATION

Digitalisation and sustainability, as emerging trends, smart technology is gradually becoming acknowledged as an integral part of daily life. In addition to being an unstoppable global phenomena, sustainable cities that are connected and optimised via the use of technology are the only way to contain and lessen the grave environmental and socio-economic effects that urbanisation will have on our planet. Currently, smart cities are not just about smart tools to solve operational problems and the goal to make the cities and human settlements inclusive, safe, resilient and sustainable. Digital transformation has become an inevitable requirement for many industries and firms to respond to the call for sustainable development and promote green innovation.

“Green Innovation and Sustainable Digitalisation” would like to highlight that the commitment to green innovation and green development will continue in the future. These challenges are ones that every enterprise, organisation, and individual must face, and the only way to overcome and achieve the goal is through continuous collaboration on innovation. One of the important guarantees for achieving a win-win situation for both the economic and environmental development of all mankind. Living Smarter, Living Better, unleash the power of technology, and live the smart way!

MESSAGE OF ORGANISER

In our rapidly evolving world, it is crucial that we find ways to improve our quality of life while also reducing our impact on the environment. Smart living green sustainability innovations offer a promising solution to this challenge.

Firstly, smart energy systems are revolutionising the way we consume and manage energy. With the use of sensors, automation, and intelligent controls, we can monitor and adjust our energy usage in homes and offices. This includes automated lighting controls, smart thermostats, and energy management systems that help reduce energy consumption and lower carbon emissions.

Secondly, green transportation is transforming the way we move from one place to another. Electric vehicles and hybrid cars have gained popularity, significantly reducing tailpipe emissions and air pollution. These vehicles utilise electric power or renewable fuels, paving the way for a cleaner and greener transportation sector.

Thirdly, smart home technologies empower individuals to efficiently manage energy and resources. Smart appliances and home automation systems can optimise energy usage based on user behaviour patterns and energy demands, resulting in energy and cost savings.

Fourthly, sustainable building designs play a vital role in green innovation. Incorporating eco-friendly materials, maximising natural light and ventilation, and implementing energy-efficient systems can significantly reduce energy and resource demands in buildings while creating healthier and more comfortable indoor environments.

These examples of smart living green sustainability innovations demonstrate the power of technology and innovation in promoting environmental sustainability. By embracing these innovations, we can achieve a more sustainable future, reducing carbon emissions, conserving energy and resources, and enhancing our overall quality of life.

We are proud to be hosting the Award together with Cyberport, it would not be successful without the support of partners, panel of judges and all supporting organisations.

ET Net is No.1 financial services provider in Hong Kong. We are providing thousands of real time financial terminals to professional traders and also financial contents to banks and brokers. Its mobile apps are also the most popular among investors with 1.5 million downloads and over 450K daily users.

MESSAGE OF CO-ORGANISER

For the third consecutive year, Cyberport, in partnership with ET Net, is proud to present the "Smart Living Partnership Awards" to celebrate the pivotal role that companies and organisations play in transforming Hong Kong into a smart city.

Recent advancements in cutting-edge technologies, alongside growing environmental concerns and the global challenge of climate change, underscore a compelling need for society to embrace digitalisation and decarbonisation to achieve sustainable development.

In light of these critical challenges, the Award this year is themed "Green Innovation and Sustainable Digitalisation" to honor those who are pioneering forward-looking and future-proof solutions to address these pressing issues, helping to maintain Hong Kong's competitive edge in a rapidly evolving global landscape.

Cyberport's unwavering commitment to sustainability and smart living is deeply rooted in our belief that digital transformation, innovation and technology (I&T), and collaborative partnerships are the cornerstones of achieving our shared vision.

With Cyberport's robust technological ecosystem and a dynamic community of over 760 smart living startups, we are actively transforming our hub into a leader in smart living solutions. Our diverse sectors, including GreenTech, HealthTech, EdTech, PropTech and GeronTech, not only pioneer innovative solutions but also integrate these advancements into our expanding Cyberport campus. This integration assists startups and tech companies in bringing their visionary concepts to life, greatly benefiting the wider Hong Kong community.

Through the collaboration with different stakeholders including ET Net, we will continuously support companies and organisation that are pioneering green innovations to help Hong Kong achieve carbon neutrality before 2050 and assist our country in advancing towards the "3060 Dual Carbon Targets".

MESSAGE OF HEAD OF JUDGE

BUILDING AN AGE-READY SMART CITY

Hong Kong has already become a 'super-aged society', meaning more than 20% of people are aged over 65.

To better address the ageing challenge, the following areas should be improved to build a sustainable age-ready city:

1. Improving accessibility standards so that universal design is no longer an optional or afterthought, especially for those with mobility, cognitive, hearing, or vision challenges. This requires collaborations between urban planners, architects, engineers and related professionals.
2. Homes must be well-equipped with IoT system so that people can enjoy the smart elder care medical service. This will be particularly useful as the service both saved patients from in-person hospital visits and reduced pressure on the healthcare system.
3. To close the gaps and assist caregivers and service providers who help older persons, innovative solutions should be highly recommended, such as low-cost medical technologies or solutions that are age friendly. An online hospital can be set up to provide a series of services, including consultations with doctors, diagnosis, prescriptions, disease management and other follow-up services.

I hope that smart city development can improve quality of life so that citizens can experience the benefits of advanced technology as soon as possible. At the same time, it is advisable to increase citizens' participation and brainstorm to better leverage the benefits of smart cities, leading the Hong Kong to become a model of age-ready smart city for other countries.

Dr. Winnie Tang, MH, JP

Founder and Honorary President,
Smart City Consortium

Panel of Judges

Mr. Emil Chan

Founding Chairman,
The Association of Cloud and Mobile Computing Professionals

Smart Living Awards, exploring the leaders of the intelligent era, celebrating leadership in integrating the East and West, and bridging the realms of reality and virtual.

Mr. Eddie Cheung

Consultant,
OPo Technology Limited

Empowering green technological innovations for impactful smart societies.

Dr. Keith Chau

Senior Consultant, CPCE, The Hong Kong Polytechnic University
Director, Digital and Technology Experience Research Center, DTA

Strive a balance between life and AI to enhance the effectiveness of city management and improve people's quality of living and Hong Kong's sustainability.

Dr. Lawrence Cheung

Chief Innovation Officer,
Hong Kong Productivity Council

I appreciate the Award's emphasis on Green Innovation & Sustainable Digitalisation, vital elements of New Productive Force.

Mr. Ricky Choi

Cluster Lead (Smart Living),
Hong Kong Cyberport

Cyberport currently has about 60 start-ups engaging in green technology. We're keen to accelerate the development of New Quality Productive Forces driven by technological innovation.

Panel of Judges

Mr. Francis Fong

Founding and Honorary Chairman,
Hong Kong Association of Interactive Marketing

Smart Living is concerned about the future of people's well-being. Also, the best practices and sustainability of the ecosystem.

Mr. Vincent So

Chairman,
Hong Kong Retail Technology Industry Association

As Internet of Things (IoT), Big Data, and Artificial Intelligence (AI) have matured, they have found applications in creating more interactive, personalised, and efficient retail environments.

Mr. Peter Koo

Director of Finance Committee,
GBA 5G Industry Alliance

Transform into eco-friendly lifestyle, explore sustainable fashion choices, and embrace zero-waste smart living. Let's make meaningful changes starting from this generation!

Prof. Ir. KF Tsang

Vice President,
Smart City Consortium

Smart livings boost economy, integrate automation, sustainability, and AIoT to enhance efficiency, security, and comfort through innovative, connected systems that adapt to user needs.

Ms. Sandra Leung

Founder and Executive Director,
Hong Kong Technology Advancement Group

Go green with innovations for sustainable future proof your successful business.

Mr. Valent Tse

Legal Advisor

Partner,
Messrs. Tung, Ng, Tse & Lam, Solicitors ("TNTL")

With the guidance of the legal perspective, we focused on supporting businesses across the ecosystem and helping to deliver a net zero global economy in emerging markets.

WINNERS - CONSUMER FINANCIAL SOLUTION (E-PAYMENT)

Outstanding Mobile Payment Platform

Octopus Cards Limited

Operating under the Stored Value Facilities Licence, Octopus Cards Limited (OCL) provides innovative offline and online Octopus payment services to meet customers' diverse payment needs.

Launched in 1997 by OCL, the Octopus system in Hong Kong is one of the world's leading and most extensively accepted contactless smartcard payment systems. Its aspiration is to bring diversity and inclusion in payment to customers of all facets of life.

Today, more than 20 million Octopus Cards and products are in circulation; spanning businesses including public transport, parking, retail, self-help services, schools, and leisure facilities, and access control for residential and commercial buildings. There are over 180,000 Octopus acceptance points in the market. Octopus' application has been extended to online and mobile payment arenas with services including Octopus Card on iPhone and Apple Watch, Octopus Card on Samsung Pay, Octopus Card on Huawei Pay, Octopus App, Octopus Wallet, Octopus Mastercard® and UnionPay, bringing new payment experiences to customers.

The Octopus Group exports its unique experience and technology overseas, offering consultancy services across the world. The mission of OCL is simple: Making everyday life easier.

Transform Learning with Bright Mage Academy, an Innovative and Engaging Game-Based Learning Platform

- Moti4Learn Pedagogy
- Curriculum-Aligned Education
- AI-Based Adaptive Learning
- Comprehensive Monitoring Tools
- Self-Learning with Targeted Support
- Fantasy Role-Playing Game (RPG)

WINNERS - EDUCATIONAL TECHNOLOGY

Outstanding Innovative Game-based Learning Platform

Bright Education Technology Limited

Bright EdTech reshapes students learning through motivation and technology. With our Moti4Learn pedagogy, we empower an immersive education platform that seamlessly integrates curriculum-aligned content into engaging gameplay for effective education.

Our goal is to create a motivational learning platform that harnesses the educational potential of digital gaming, transforming students' screen time into valuable and effective learning experiences that foster self-learning, academic excellence, and self-esteem.

As a graduate of Cyberport Incubation, we've developed our flagship product, Bright Mage Academy. Our advanced education platform stands out by incorporating technology-aided Moti4Learn pedagogy, which includes four dimensions of motivation and AI-based Adaptive Learning, to engage students in personalised and captivating fantasy RPG games.

We are dedicated to revolutionising education by leveraging the power of motivation, technology, and immersive gameplay. We strive to empower students, educators, and parents, creating a brighter future where education is engaging, effective, and accessible for all.

即學課程預訂平台，一站式完成課程搜尋、預訂和支付流程，為家長和學校提供各類兒童課程和活動，提升整體生活質素，同時協助教室及導師以零成本增加曝光率，輕鬆接觸潛在學生。

ILK is a one-stop class booking system to connect parents and schools with a wide range of children's courses and activities. Our all-in-one platform streamlines class search, booking, and payment, enriching users' lifestyles altogether. We collaborate closely with our education partners, helping them reach potential students effortlessly at zero cost.

平台特色 Platform Features :

- ✓ 一站完成搜尋、預訂、支付
All-in-one "search, book, pay" functions
- ✓ 簡易篩選過千課程
Multiple filters for 1000+ classes and activities
- ✓ 真實評分保證質素
Verified reviews and testimonials
- ✓ 全面系統輕鬆管理
Comprehensive management system
- ✓ 智能推薦相關課程
AI-powered recommendations

WINNERS - EDUCATIONAL TECHNOLOGY

Outstanding One-Stop Class & Activities Booking Platform

ILK Learning

ILK Learning

ILK Learning (ILK – I Love Kids) is a revolutionary Class Booking System that caters to the evolving needs of educators, parents, and learners in the dynamic field of technology. With a strong emphasis on AI-empowered environment and a deep commitment to social responsibility, ILK Learning fosters a collaborative and supportive ecosystem that addresses the pressing challenges faced by the education industry.

Recognizing the struggles of educators in student recruitment, low income, and lack of marketing knowledge, as well as the difficulties parents encounter in finding suitable classes for their children without reliable ratings and reviews, ILK Learning's comprehensive solution aims to provide a complete package from recruitment to a sophisticated back-end class management system.

By empowering educators, supporting parents, and delivering a seamless learning experience, ILK Learning seeks to revolutionize the way education is accessed and managed. This innovative platform harnesses the power of technology, including AI, to create an environment that enables educators to thrive, parents to make informed decisions, and learners to unlock their full potential, paving the way for a brighter and more equitable future in education.

Outstanding Web3 Education Platform

PREFACE Prolog

Preface

Preface is a leading global EdTech company on a mission to bridge the gaps in traditional education, and nurture global talents through customised, uptrend, and bitesize tech content. Armed with the creation of personalised tech education content creation and delivery through decentralised "classrooms", Preface has not only globalised learning experiences, but also positioned themselves as the go-to corporate training ally for notable MNCs, such as, IWC, LVMH, L'oréal, JP Morgan, HSBC and Standard Chartered, whilst also playing a pivotal role as a recognised leader in government-endorsed digital transformation initiatives.

Prolog is a Web 3 infrastructure developed by Preface that empowers educators, operators, and content contributors to rapidly create content and curriculum while ensuring expert validation through on-chain processes. Prolog will be powered by \$LOG, a fungible, utility token earned by learners, teachers, content creators and educational operators for their efforts in the 8-step content creation process, and held by stakeholders to unlock a diverse range of perks from the community membership system. Through its infrastructure, Prolog presents a reimagination of how educational content is created, distributed, and consumed, ushering in a new era of accessibility, quality, and innovation in learning in a traditional education industry in desperate need of a revolution.

Wanted to do Different

Big data analysis

WINNERS - HEALTH TECHNOLOGY

Outstanding Artificial Intelligence Eye Health Self-assessment
App

Healfie Technology Limited

Healfie Technology Limited is a local startup dedicated to promoting public eye health. We provide eye screening services to the community through regular outreach, addressing the limited access to eye clinics and the lack of awareness about eye health information. Our efforts also focus on raising awareness of age-related macular degeneration and its impact on eye health.

We understand the challenges faced by individuals diagnosed with eye conditions, such as long wait times for follow-up appointments and difficulty in providing accurate information due to memory decline, particularly among the elderly.

Over the past year, we have conducted screening services for over 2,000 individuals, enabling early detection of eye issues and timely medical intervention to prevent vision deterioration. We prioritise educating users on how to utilise our app during these activities, empowering them to continue self-monitoring conveniently.

AI-empowered Toxicological Evaluation Platform for Generic Drugs

AITEP

Background

- Pharmacy and Poisons Board of Hong Kong is the 47th Participating Authority of the Pharmaceutical Inspection Co-operation Scheme (PIC/S) and upgrading to PIC/S Annex 17 is needed
- Toxicological evaluation becomes compulsory for all medicinal products to determine residue limits for cleaning validation

Implementation Obstacles

- Scattered toxicological information for 4,084 generic drugs in Hong Kong
- Over 54.4% active pharmaceutical ingredients (API) from generic drugs shared by multiple manufacturers
- Large manpower needed for retrieving such information

Aim

To establish an AI-aided and Centralized Toxicology Evaluation Platform (AITEP)

Infrastructure of AITEP

DP2: A distributed web scrapping system

ToxiClassify: Filter toxicological data from large amounts of data

RiskSmart: Extract toxicological parameters from the text

PDEscribe: Summarize data and generate PDE reports

System Innovations

- Accuracy:** Accurate classification and extraction of toxicological data from web sources
- Innovativeness:** Incorporating cutting-edge technologies in NLP and AI
- Thoroughness:** A holistic approach from initial data analysis to final risk assessment
- Efficiency:** Speed up the drug evaluation process and facilitate quicker decision-making
- Practicality:** An intuitive interface that simplifies complex processes, making it accessible even to those with limited technical expertise

Process of Cleaning Validation

WINNERS - HEALTH TECHNOLOGY

Outstanding AI-empowered Toxicological Evaluation Platform for Generic Drugs

Logistics and Supply Chain MultiTech R&D Centre
物流及供應鏈多元技術研發中心

Logistics and Supply Chain MultiTech R&D Centre & The Chinese University of Hong Kong

Logistics and Supply Chain MultiTech R&D Centre

Logistics and Supply Chain MultiTech R&D Centre (LSCM) was founded in 2006, with funding from the Innovation and Technology Fund of The Government of the Hong Kong SAR, and is co-hosted by the University of Hong Kong, the Chinese University of Hong Kong and the Hong Kong University of Science and Technology. It aims to strengthen the local logistics sector and related industries by providing a one-stop resource for applied research and technology transfer, and to reinforce cooperation between the industry and research institutes, so as to bring about meaningful and significant benefits to the industry and the community.

The Chinese University of Hong Kong

The Chinese University of Hong Kong (CUHK) is a prestigious public research university located in Shatin, Hong Kong. Established in 1963 through the amalgamation of three post-secondary colleges, CUHK distinguishes itself with a unique college system and a bilingual mission in Chinese and English. The university is renowned for its expansive campus, the largest in Hong Kong, which offers panoramic views of the Tolo Harbour and houses a diverse array of facilities, including state-of-the-art research institutions, libraries, and sports facilities. CUHK offers a wide range of academic programs across its nine faculties, which include Arts, Business Administration, Education, Engineering, Law, Medicine, Science, Social Science, and Chinese Medicine. Known for its emphasis on holistic education, CUHK fosters a vibrant intellectual environment that nurtures leadership and innovation among its students, making significant contributions to the academic world and beyond.

WINNERS - HEALTH TECHNOLOGY

Outstanding Smart Home and Telenursing Platform

SmartAge Intelligence Limited

SmartAge Intelligence Limited (<https://smart-age.net>) is at the forefront of revolutionising elderly care through accessible and cost-effective telenursing preventive solutions. The mission is to provide comprehensive support for elderly individuals living independently with minimal to mild assistance needs. Leveraging cutting-edge technology and nursing expertise, it offers innovative services that promote aging in place and empower seniors to live with dignity and independence. Understanding the hurdles faced by elderly individuals and their families in detecting health risks early and accessing top-notch nursing services, the SmartAge team develops the proactive caring SmartAge Home System. This platform analyses daily activity pattern changes, generates preliminary health alerts, and provides compassionate guidance, ensuring continuous family support remotely. In the SmartAge Care Service, telenurses leverage this data and AI to pinpoint individual needs, offer triage services, and connect elderly individuals with appropriate community resources, thereby streamlining case management efficiency. This AI-powered preventive caring SmartAge Solution is a sophisticated activity pattern analysis designed to identify health risks and enable proactive intervention. The SmartAge team blends technology and nursing expertise to deliver personalised and efficient solutions. SmartAge is committed to leveraging technological advancements and social innovation to enhance the well-being of elderly individuals in our community. Supported by organisations such as the Cyberport Incubation Program and The SIE Fund, along with funding from the Hong Kong Housing Society and Cyberport PoC Programme, SmartAge is dedicated to driving positive change in elderly care.

WINNERS - MARKETING TECHNOLOGY (SMART RETAIL / E-COMMERCE)

Outstanding Artificial Intelligence Photo Platform

Gump Ai Limited

Gump is a revolutionary AI platform that leverages visual data from customer photos to create rich profiles and deliver hyper-personalised recommendations. We are pioneering a future where marketing is a force for good, turning ads into welcomed discoveries.

In a digital landscape drowning in irrelevant ads and facing a cookieless future, Gump offers a refreshing alternative. Our AI-driven approach promises to increase conversion rates from 2-3% to 20-30%, while prioritising consumer privacy and eliminating intermediaries.

Through our D2C approach and affiliate hub, we connect marketers with their ideal audience, simplifying the path to purchase and fostering trust. Gump is not just adapting to the changing landscape; we are leading the charge, turning the potential \$100 billion loss from cookie deprecation into a \$100 billion opportunity.

Outstanding B2B AI Lead Generation & Management Platform

Pubrio Limited

Pubrio is an AI-powered B2B sales intelligence and lead generation platform that revolutionises the way businesses find and engage with potential customers. Backed by a team of industry experts such as Amazon, TEC, Ricoh, and more.

Through continuous monitoring and analysis of over 1 billion corporate websites, job postings, news feeds, and company registries, you can shorten the lead discovery process by up to 35%, our AI algorithms and data sources enable us to proactively identify and capture valuable leads.

The Pubrio team has worked in the business world for over 10 years, serving clients from the Global top 5 to the Forbes 500, from SMEs to start-ups. So we know how to use the right technology to solve the right problem.

AI driven nano-influencer campaign management platform for SMEs powered by big data analytics

Discover Best and Right Influencers to make your Business Glow!

Quick, Smart & Affordable: Reaching More for Less

Building Credibility

Real reviews and contents from influencers help build audience's trust and improve conversion rate.

More Affordable

Lower costs compared to celebrities and placing large ads. Some influencers might even waive set fees given free trial products or services.

Interesting Content

Each influencer creating their own content with their own style, making their graphics and content more unique and suiting that a particular target.

Our Solution & Benefits

Our one-stop nano-influencer solution provides consultation, campaign creation, AI influencer matching, auto-generated reports and result analysis. This platform is specifically suitable for SMEs in fashion and beauty, F&B and personal care.

- ★ Better budget control
- ★ Save time to research on the suitable influencers
- ★ Save cost as no marketing manager / digital agency is required

Tackle marketer's challenges & break through bottlenecks:

- Campaign ROI are unpredictable and hard to measure results?
- Difficult to identify right influencers in terms of target market and audience?
- Bottleneck in customer acquisition especially for younger generation?
- Low engagement and show up rate from past campaign with the previous agency?

WINNERS - MARKETING TECHNOLOGY (SMART RETAIL / E-COMMERCE)

Outstanding Artificial Intelligence One-stop Influencer Campaign Management Platform

Starnet AI Limited

Starnet AI strives to provide brand owners and marketers a whole new and seamless experience on micro-influencer marketing in a cost-saving and time-optimised way. We embrace integrating technology by deeply investing in data and artificial intelligence (AI) technology and supporting clients to enhance their marketing capabilities in order to automate marketing campaign, cultivate insights through data analysis and engage with the right target audience precisely.

blutech.io

SMART BUILDING

AI+IoT Solution

ABOUT US

blutech.io is a B2B AIoT company, founded in July 2019, aiming to connect our smart city to the future. Our current focus is to integrate AI-Powered CCTV and Smart IoT Sensors to revolutionize building management by merging advanced AI-driven video surveillance with a versatile network of IoT sensors. This integration makes it an exemplary solution for future-focused smart building management. Blutech IoT's dedication to excellence is recognized through prestigious awards, including the IF Design Award in 2024 and the 2020 Hong Kong ICT Award of the Year.

PRODUCTS

IoT SENSORS+ AI CCTV

This sophisticated system utilizes existing IP cameras, enhancing them with AI capabilities to analyze activities such as unauthorized access, while IoT sensors deliver comprehensive monitoring beyond visual range.

Our smart signages or LED indicators interact with customers by guiding the destinations, estimate queue time and showing air quality status, and meanwhile offering a peaceful ambience in public spaces.

CUSTOMER INTERACTION

AIoT DASHBOARD — Property managers monitors and manages washrooms more efficiently.

With a full portfolio of fixed & mobile network capabilities, our Smart Site Safety System (SSSS) solutions provide transformative applications like Centralised Management Platform, Hazardous Area Access Control, Mobile Plant Anti-collision, Tower Crane Lifting Zone Monitoring, Worker Positioning & Vital Sign Monitoring, Danger Zone Monitoring and Confined Space Monitoring, supporting construction industry to implement SSSS and enhance construction site safety.

Digital Twin-based ESG Platform for Property and Facility Management Industries

Introduction

Why we are doing this?

- Building operations account for **30%** of global energy consumption and **26%** of global carbon emissions.
- Increasing concerns about indoor air quality (IAQ)

Challenges in Facility and Property Management:

- Lack of manpower and expertise to conduct regular on-site inspections and monitor IAQ
- Delayed data collection and inconsistent records
- Path planning capability of robots in the market cannot meet high and constant demands in conducting on-site inspections and IAQ monitoring
- Insufficient data analysis capability for decision making in building control
- Lack of analytics to support ESG management

Digital Twin-based ESG Platform

A **Digital Twin-based robot-assisted surveillance platform** which supports ESG reporting and environmental management based on **novel robot localization**, **digital twin** integration, and **AI-based spatial-temporal analytics** technologies.

The platform provides **continuous robot-based IAQ monitoring** with alerts and analytics to **reduce manpower requirements**, real-time insights for **occupants' health and satisfaction improvement**, suggestions for building operation actions with reference to alerts triggered and trends and patterns identified based on analytics, insights to **improve energy efficiency** and **reduce operational carbon emission** while maintaining IAQ in compliance with **international standards** for healthier and more sustainable built environment.

Benefits and Impacts

- Supports the **Hong Kong Smart City Blueprint** in the aspect of a smart environment and ESG reporting following **HKEX ESG Reporting Guidelines**
- Provide insights on how to improve building control in compliance with **international standards**
- Support facility and property managers to **improve ESG performance** in terms of air quality, as well as occupants' satisfaction and health
- Improves IAQ coverage to meet the high on-site inspection and IAQ monitoring demand in **high-density public places**
- Facilitating integration and dynamic display of data on digital twin-based
- ESG platform will improve building operation efficiency and coordination, and therefore lead to **cost savings in FM**
- Instills confidence** in the building industry to unreservedly adopt digital twins and robotics to improve IAQ and ESG performance. This also **reduces manpower requirement** in facility management for **sustainability** and **improves living quality**

Market Potential

- Worldwide facility management market will be worth **USD 94.8 billion** by **2028**, in which Asia Pacific accounts for **30%**
- HKEX mandated ESG reporting** for listed companies since **2013**. It has recently enhanced climate-related disclosures and will be effective from the **2025** reporting year
- Based on the estimation from US Department of Energy, smart / predictive FM brings **30-40% cost saving**. The building industry is **the largest in Hong Kong** and it can implement technology to improve its **efficiency** and **cost effectiveness**

System Innovations

Data Fusion on Digital Twin for ESG Reporting

IoT data Capturing and Integration for IAQ Monitoring

Point-of-Interest Analytics for Facility Management with Alert System

Robotic Location Data Capturing for AI-based Spatial-Temporal Analysis

Holistic Robot Path Planning

WINNERS - PROPERTY TECHNOLOGY

MTR has extensive end-to-end railway expertise with 45 years of railway projects experience from design to planning and construction through to commissioning, maintenance and operations. Going beyond railway delivery and operation, MTR also creates and manages dynamic communities around its network through seamless integration of rail, commercial and property development.

Advancing every journey with Go Smart starts with customer-centricity - we are committed to providing seamless and hassle-free railway services to passengers and communities. We take heed of technological advancements and innovative initiatives, providing a personalised and smart commuting experience. Going beyond every journey, we create an inclusive and sustainable community. To contribute to a greener future, we commit to energy saving, emissions reduction and greening of stations, by connecting with the Go Green low-carbon lifestyle of the public.

NEC Smart Fleet Management System

Enabling Smart, Safe, Seamless & Secure Transportation System

NEC Smart Fleet Management System is a true integrated and multi-tasking solution for transport operators to supervise and control fleet operations with real-time data with high accuracy.

The system provides real-time management of fleet operations, monitoring and reporting as facilitated by the versatile **Onboard Units combining with the robust Backend System**, which support fleet routing and assignment, vehicle location positioning, onboard and stop announcement and information dissemination, Estimated Time of Arrival (ETA), CCTV and in-vehicle monitoring, incident reporting, data analysis as well as business intelligence.

Outstanding All Man Kind Inclusive Multi-functional Bus App

The Kowloon Motor Bus Company (1933) Limited

Established in Hong Kong since 1933, The Kowloon Motor Bus Company (1933) Limited ("KMB") has emerged as the largest franchised bus operator in the city. Operating with a rich history, KMB caters to a staggering 2.5 million passenger-trips daily.

With a dedicated workforce exceeding 11,000 employees, including 9,000 bus captains, they have been the backbone in upholding KMB's high quality of standard and service to our valued customers. Our fleet, consists of around 4,000 buses, traverses a network of over 400 routes covering Kowloon, the New Territories and Hong Kong Island.

As we stride forward, KMB embraces a new era by integrating eco-friendly bus fleet, fostering innovations and technologies. On top of expanding the new energy bus fleet, which leads to zero emissions, we have also been equipping our vehicles with the new 5G mobile communications standard as well as installing solar panels on double-deck buses to supply power to in-bus electronics. KMB is committed to keep going Green and Smart.

Total Airport Management

推動工地安全 自主研發智能手錶

夏日炎炎，除了容易引發中暑，亦有機會遇上酷熱天氣警告、暴雨警告、雷暴警告等等。戶外工作者面對變幻莫測的天氣，可以如何有效地掌握實時情況及做好準備？科技公司Team Concepts近期自主研發推出的智能手錶，除了滿足安全智慧工地 (Smart Site Safety System / 4S) 的要求，亦能實時監測工友的靜止、跌倒或身體異常情況，以及具備SOS求救定位等功能，協助及時處理緊急情況，降低風險。

另外，智能手錶還可以自動接收香港天文台發出的各種天氣警告，以及勞工處的工作暑熱警告（黃/紅/黑）通知，有效提醒工友適當休息及補充水分，並且及時做好預防措施，提升工地安全。智能手錶更可以配合公司研發的「Smart Proximity」危險區域監測警報器，安裝在起重機或吊車等頂部，當監測到有人靠近危險區域時，手錶會即時語音提醒司機附近有人，大大減低風險。

WINNERS - SMART WORKFORCE MANAGEMENT

Outstanding Smart Safety Health & Efficiency Integrated Management Solutions

TEAM CONCEPTS

天空社

Team Concepts Limited

Team Concepts is a one-stop total solution provider for Smart Safety and Health AIoT products and Management System, including Smart Site Safety System (SSSS) solution and products, such as Smart Gas Detector, Smart Watch, Smart Helmet Strap Detector, Smart Proximity, Confined Space Solution, Indoor & Outdoor Location Tracking, Smart Weather Station, as well as Digitalised Permit-to-Work and Smart Workforce Management software system, bringing full insights of work site and personnel, promote better safety and health, and worker efficiency.

Our products and solution have deployed into Construction, Utilities, Maintenance works across departments, such as EMSD (Electrical and Mechanical Services Department), CEDD (Civil Engineering and Development Department), DSD (Drainage Services Department), WSD (Water Supplies Department), ASD (Architectural Services Department), HD (Highways Department), HK Housing Society, Cyberport, etc. projects.

智慧健康預警監測系統

平安錶是一款健康警報管理應用程式，可協助安全官員使用智慧手錶監控建築工地工人的健康狀況。手錶體積小，方便部署，受到工人的歡迎。如果需要，工人只需按下 SOS 按鈕即可尋求協助。採用遠距離無線技術，平安錶不僅可以覆蓋大面積，而且與 WiFi 和 4G 技術相比，部署靈活且經濟高效。人工智慧模組可以獲得工人的異常健康和環境數據並發出警報，例如過熱警告和跌倒警報。

物聯網無線技術

平安錶使用物聯網無線技術 LORAWAN，提供遠距離、低功耗和安全的無線數據通信。因此，平安錶可以提供經濟高效且快速的部署。

**SquareDog
Robotics**

SquareDog Robotics Limited

SquareDog Robotics is a technology innovation company founded in 2018, focusing on the research, design, and manufacturing of intelligent building robots. We are also the first company in the world to use welding robots on construction sites, and we have multiple unique patented technologies. Our goal is to provide lightweight, flexible, easy-to-use, cost-effective, and safe and efficient intelligent building robot solutions. The robot design allows ordinary workers to operate them easily, without the need for professional skills or experienced workers. SquareDog Robotics' solutions can be applied to various construction areas, including welding, assembly, cleaning, and other tasks requiring robotic assistance, bringing innovative technologies and unique robot solutions to the construction industry. Our products have the potential to drive the automation and intelligence development of the construction industry, while also improving work efficiency and personnel safety.
